FIRECHIEF® SITEWARDEN RF PRO SITE ALARM - FIRE & FIRST AID

The FSP500 Sitewarden Fire and First-Aid Site Alarm is a battery-powered, wireless critical alert system designed for maximum portability and ease of installation. Each unit can be paired with up to 63 additional units to create a comprehensive, site-wide alert network.

When activated, the FSP500 delivers high-quality audio, as well as bright, strobing LEDs for visual alerts. Any unit can be configured as a master unit, capable of identifying and announcing which specific unit has been triggered.

Upon activation of the Fire button, all units will broadcast a pre-recorded alert message, with the master unit identifying the source of activation. In the case of a First-Aid alert, only the activated unit and the master unit will sound, though all units can relay the wireless signal across the site.
