FireShield LFX Lithium-Ion Fire Extinguishers

Lithium-ion batteries are in every area of our lives now. Whether it is in chargable vapes or mobile phones, laptops or cordless power tools, or larger items such as electric scooters. If you recharge a battery, you have a lithium-ion battery fire risk.

Our FireShield LFX 6ltr and 9ltr fire extinguishers are **NTA 8133** tested up to **600Wh**. NTA 8133 is the first standardised publication of testing for portable fire extinguishers on lithium-ion battery fires.

FireShield LFX fire extinguishers are water-based and 100% fluorine-free. Therefore, in addition to tackling lithium-ion battery fires, it is capable of extinguishing Class A solid combustible fires including cloth, wood and paper.

The FireShield LFX uses an endothermic process to absorb heat and break-down the chain reaction known as 'thermal runaway'. This aids in preventing the surrounding cells from overheating and catching fire.

3Litre: 13A

6Litre: 27A

9Litre: 34A

Suitable for; vapes, smart phones, tablets, smart watches & laptops

Suitable for; cordless power tools, vacuum cleaners and handheld self-serve scanners

Suitable for larger equipment including; e-bikes and e-scooters
